

Java

```
class Solution {  
    public int sumDecoded(long[] nums) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} nums  
 * @return {number}  
 */  
var sumDecoded = function(nums) {  
  
};
```

TypeScript

```
function sumDecoded(nums: number[]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
int sumDecoded(vector<long long>& nums) {  
    }  
};
```

C#

```
public class Solution {  
    public int SumDecoded(long[] nums) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun sumDecoded(nums: LongArray): Int {  
    }  
}
```

Go

```
func sumDecoded(nums []int64) int {  
    }
```
